RESPONSIBILITIES

The Chief Architect is a key role for the success of the lab by providing vision and leadership for developing, implementing and supporting platform and product technology initiatives. Here, you'll have the opportunity to drive and own a "startup" within our lab, bringing with it the accountability and autonomy that you crave. Your technical knowledge and leadership skills will heavily be relied upon to plan the platform technology future for the organization, align our teams on both strategic and tactical direction, as well as for the implementation and delivery of these systems.

We need a strategic technology professional who has successfully scaled and shipped software development to support a hyper-growth technology company. Ideally, you've previously created new products, market offerings or even entire organizations from the ground up. You've also assessed and implemented certain technology directions, recruiting top talent to join your efforts and engaged with key vendor partnerships in order to scale your efforts significantly to meet the demands of technology delivery. If you embrace change and are comfortable wearing many hats in order to deliver top quality industry-leading software and services, you could be a perfect fit to change the future with us.

MINIMUM QUALIFICATIONS

- Past experience leading technical teams at the CTO or VP of Engineering level
- Technical experience developing web presences, recruiting and managing software engineers, automation engineers, UI/UX designers and product managers
- Experience with Agile/Scrum development methodologies
- Masters / Bachelors' degree in Computer Science or related field (In lieu of degree, 4 years of relevant work experience)
- Minimum of 6+ years of relevant experience in designing large scale solution architectures
- Knowledge of one of the following languages: C#, Java, C++, Ruby, Python, Scala
- Thorough knowledge of database technology, message queuing, services architecture & modern deployment/CI techniques

PREFERRED QUALIFICATIONS

- Familiarity with client side MV* frameworks, e.g. React.js, Angular.js

- Experience with at least one major server side web development stack
- Experience with Infrastructure as a Service, e.g.: AWS, Google Cloud or Microsoft Azure
- Experience with Node.js for Server Side JavaScript development
- Experience with NoSQL databases & the Hadoop ecosystem
- Experience with Agile/Scrum/XP as software development methodology
- Experience leading globally distributed teams
- Experience working with external technology vendors
- Experience operating in both startup & enterprise application development environments
